- Mockups
- Wireframes
- Figma
- PHP
- C#
- SQL
- Python

Experience

Web Developer Intern, Jamaica Teaching Council

August - October 2024

- Solely developed the company intranet utilizing WordPress CMS, JavaScript, and PHP, resulting in increased individual productivity and improved inter-departmental communication and collaboration. The application includes features such as real time meeting and event updates, inventory management, a document repository, employee messaging etc.
- Led the design and development process for the company intranet, ensuring a user-friendly interface and efficient functionality for all employees.
- Conducted training sessions for employees on the new intranet application, demonstrating strong communication skills and a focus on user adoption.

Projects

Hotel Finder and Comparison Web App

Developed a visually rich and interactive web application enabling users to explore resorts in their area and plan their ideal vacation. Features an interactive map with resort markers, detailed resort previews upon selection, and the ability to build a personalized "dream vacation". Improved the user experience of searching for resorts.

- Implemented an interactive map interface using Google Maps and JavaScript to display resorts across in a specific area, providing a dynamic exploration experience.
- Designed and developed visually appealing resort preview sections triggered by map marker clicks, showcasing key features and amenities.
- Enabled users to create personalized vacation itineraries with a drag-and-drop interface (using JavaScript), allowing selection and arrangement of virtual activities and amenities.

Personalised Music Data Visualiser using Spotify API

Developed a dynamic web application leveraging the Spotify API to provide users with personalized insights into their music preferences and discover new music. The application features secure authentication via Spotify's OAuth and visualizes user data for an engaging experience. Connected users more to their musical habits, providing data not readily available.

- Implemented secure user authentication and authorization using Spotify's OAuth 2.0, ensuring user data privacy and seamless access.
- Developed a user-friendly interface using vanilla JavaScript to fetch and display user's top genres, songs, and artists from the Spotify API.
- Integrated Chart.js library to visually represent user data, such as top genres and artist popularity, enhancing data comprehension and user engagement.
- Ensured a responsive design to provide an optimal viewing experience across various devices.
